PROFESSIONAL SUMMARY

Full-Stack Software Engineer and recent CS graduate building production-style web and mobile apps with React, TypeScript, and Next.js. Combines hands-on engineering across the stack with a client-facing background that sharpened communication and problem-solving, now focused full-time on software development.

EDUCATION

California State University, Fullerton

Bachelor of Science, Computer Science

Graduation date: May 2025

GPA: 3.6

SKILLS

- **Programming Languages:** JavaScript, TypeScript, HTML/CSS, Python, C++, PHP
- **Developer Tools:** GitHub, VS Code, Docker, Cursor
- **Frameworks & Libraries:** React, ReactNative, NextJS, Tailwind CSS, Bootstrap, ExpressJS
- **Databases:** Firebase, Supabase, MongoDB

PROJECTS

Movielly | Next.js, TypeScript, Express.js, Supabase

June 2026 - Present

- Built a full-stack movie and TV discovery app with Next.js, TypeScript, and Tailwind CSS, featuring search, ratings, reviews, watchlists, and shareable favorites lists.
- Engineered an Express.js backend as a TMDb API proxy with a hybrid trailer resolver (KinoCheck → TMDb fallback), in-memory caching, and rate limiting secured with Helmet.

TripSplit | Swift, SwiftUI, Supabase, Deno

May 2026 - Present

- Built a native iOS expense-splitting and trip-planning app in Swift/SwiftUI (~30K LOC), implementing a greedy debt-simplification algorithm to reduce group balances to a minimal set of settlement transfers.
- Engineered a three-tier receipt-scanning pipeline: Claude for structured extraction, Gemini as a server-side fallback, and on-device Apple Vision OCR for offline and final-failure cases with a CoreImage preprocessing stage handling deskew, enhancement, and rotated-receipt retries
- Designed a versioned Postgres schema across 17 migrations with Row Level Security policies covering financial authorization, storage access, and user-generated content moderation, validated by SQL-based security release gates.

Academic Event Management | PHP, MySQL, Tailwind CSS

January 2024 - May 2024

- Built a full-stack event management web app with a 6-person team, using PHP and MySQL to handle user registration, event creation, and attendee sign-ups.
- Designed a normalized relational schema (ER-modeled) in MySQL and implemented data access with parameterized prepared statements to guard against SQL injection.
- Created a responsive interface and session-based authentication for user login and event organization.

PROFESSIONAL EXPERIENCE

Content Analyst

July 2026 - Present

Vaco by Highspring | Google Project

- Review high-volume content appeals across Google platforms, applying detailed policy criteria to make consistent, accurate enforcement decisions at scale.
- Meet daily throughput and quality targets (AHT, accuracy rate) while handling ambiguous edge cases requiring judgment beyond written guidelines.
- Document policy violations and surface recurring patterns to cross-functional teams, contributing feedback that informs guideline refinement.

Associate Personal Banker, Analyst

October 2024 - June 2026

Wells Fargo

- Handle sensitive financial data in strict compliance with regulatory, and risk-management standards, reinforcing attention to detail and a security-first mindset.
- Educate clients on digital banking tools and self-service options to enhance their overall banking experience
- Diagnose and resolve client account and transaction issues under time pressure, applying structured problem-solving to reach accurate outcomes.
